

# The AI-Powered Video Production Pipeline

A visual map for creating 3-5 minute videos using modern AI & editing tools, from script to social media.

## PHASE 1: SCRIPTING & PRE-PRODUCTION

### Receive Rough Script

The process begins by taking the initial script draft directly from the client.

### Structure Script with AI

Use the 'Script Writer Gem' in Google Gemini to convert the rough draft into a professionally structured script.

### Client Review & Edits

Share the structured script with the client to collaborate on edits and get approval.

### Generate a Shotlist

Convert the approved script into a detailed shotlist, likely using an AI assistant like Gemini.

### Finalize Characters & Storyboard

Create character sheets for client confirmation and then build a detailed storyboard with each shot timed out.

## PHASE 2: VISUAL ASSET CREATION

### Create Scenery & First Frames

Generate scenes/setting shots and all "first frame" shots using tools like Bexé and/or Nanabanana Pro.

### Upscale Image Assets

Enhance the resolution and quality of all static image assets created for the project.

### Generate Video Assets

Use the prepared "start frames" to create the final video clips and animations.

### Upscale Video Assets

Improve the quality and resolution of the generated video clips using tools like Topaz Labs Video AI.

## PHASE 3: EDITING & AUDIO POST-PRODUCTION

### Assemble a Rough Edit

Create a rough out of the video in an editor like Filmora Wondershare and share it with the client for initial feedback.

### Generate AI Voiceovers

Export character audio clips and use ElevenLabs to skin them with new, high-quality AI-generated voices.

### Replace Dialogue

Import the new dialogue from ElevenLabs into the editor, replacing the original placeholder audio.

### Mix Final Audio

Integrate sound effects, narration, voiceovers, and a music score into the project.

## PHASE 4: FINALIZATION & DISTRIBUTION

### Final Touches

Perform final color grading on the video and normalize all audio levels for a consistent sound experience.

### Export & Deliver

Export the final video file and submit it to the client for their ultimate approval.

### Create Social Media Shorts

Edit 30-60 second clips for YouTube, Instagram, and TikTok that end on a cliffhanger with a call to action (CTA).

## THE TOOL STACK

Scripting & AI Assistance:  
Google Gemini

Video Generation:  
Veo X1,  
Reve App

AI Voice Generation:  
ElevenLabs

Editing & Upscaling:  
Filmora Wondershare,  
Topaz Labs Video AI

Stock Assets:  
Freepix
